TCI® TH350 2-Speed CircleMax Transmission™ And FastLap Torque Converter™ Combination Now Available

Perfectly matched transmission and torque converter combination makes it easy to select the right drivetrain parts for your circle track application

Circle track racers looking for the ultimate transmission/torque converter package will find the TCI® TH350 2-Speed CircleMax Transmission™ and FastLap Torque Converter™ to be the perfect solution. This performance-matched combination is engineered to operate in second gear, yielding reduced converter slippage, often a concern with automatic transmissions of this type.

Due to a significant increase in efficiency, the TCI® TH350 2-Speed CircleMax Transmission™ and FastLap Torque Converter™ Combination reduces engine rpm by 300-400 rpm for better temperature control and provides an increase in throttle response and acceleration. Best of all, it provides maximum engine braking to help slow the car down going into the corner, making it perfect for stock cars and trucks that are limited on allowable rear end gearing. For classes that mandate use of GM TH350 transmissions, there is no better choice for asphalt or dirt racing competition. As with every TCI® transmission/converter, these units are triple tested (including a complete dyno certification of the transmission) and rigorously inspected to provide unmatched performance and race-after-race durability

For more information about the TCI® TH350 2-Speed CircleMax Transmission™ and FastLap Torque Converter™ Combination or any other TCI® product, call us at 1-888-776-9824, or visit us online at www.tciauto.com.

Quick Summary

Product: TCI® TH350 2-Speed CircleMax Transmission™ & FastLap Torque Converter™ Combination

Part Number: #312021

Features & Benefits:

- 2-Speed TH350 transmission & torque converter combination delivers improved throttle response, acceleration & engine braking for circle track racing
- Engineered to be raced in second gear for increased efficiency/reduced converter slippage
- Maximum engine braking in all gears allows driver to drive deeper into the corners
- Posi-Drive Technology increases horsepower transfer efficiency for faster lap times
- Triple tested and rigorously inspected to provide unmatched performance & durability
- Hot set-up for stock car & truck classes, asphalt & dirt requiring GM TH350
